## **Abstract**

This is a producer to a buyer(or wholesaler or dealer or exporter), b2b or p2b e-commerce web application, which mainly focuses on the problem of small-scale producers i.e. lack of marketing and business relations, resulting in conventional deals. This will be mainly helpful for small businesses which lack high production and budget. Our web application provides good quality products with a quantity which is reasonable for the price range and has efficient logistics services for the very fast delivery of products and also track their products and sales. The project can be classified into three users that is admin, wholesaler, and retailer. The project provides services like hosting their product on the website and selling them in bigger quantities, the user can track their purchases and sales done by them. The retailer gets a personalized interface based on the search made by him on the website. The reason behind this web application is purchasing good quality products at reasonable prices, with good offers.
